

System Architecture Audit — Complete GHL Build Guide

Generated March 31, 2026 — Paradigm Consulting — All workflows, email copy, field mappings, and testing steps

WHAT'S ALREADY DONE (VIA API)

- ✓ 10 custom fields created and confirmed
- ✓ 5 tags created and confirmed
- ✓ Pipeline "Paradigm Leads" verified with all 11 stages
- ✓ Intake workflow "System Architecture Audit" exists and is published
- ✓ Webhook payload includes quarterly cost fields
- ✓ Shared multi-assessment fields verified (assessments_completed_count, worst_assessment_tool, etc.)
- ✓ HTML deployed to paradigmconsulting.io/system-architecture-audit

Custom Fields Reference

TAG	PURPOSE
<code>system-architecture-lead</code>	Source tag — all SAA completions
<code>saa-fragmented</code>	Tier tag — score 0–25
<code>saa-developing</code>	Tier tag — score 26–50
<code>saa-structured</code>	Tier tag — score 51–75
<code>saa-integrated</code>	Tier tag — score 76–100

WORKFLOW 1: SAA — EMAIL SEQUENCE

Workflow Setup

1. Create new workflow named: **SAA — Email Sequence**
2. Trigger: **Enrolled from another workflow**
3. Add **Goal Step** at the top: Contact clicks tracked link tagged **Apply-3x30S-Link**
 - o On goal fire: Add tag **applied-3x30s**
 - o Remove tag **email-sequence-active**
 - o Move pipeline to: **Application Link Clicked**
 - o Stop all further steps immediately
4. Publish when complete

Note: All emails send from "Matt | Founder, Paradigm Consulting". All CTA buttons should use tracked links tagged **Apply-3x30S-Link** (except Day 0 which links to the results page).

Email 1 — Day 0 (Send immediately, conditional by tier)

Add a **conditional branch** on **saa_tier_priority**. Four branches, one email each. All send immediately on enrollment.

BRANCH A — SAA_TIER_PRIORITY = 1 (FRAGMENTED)

Subject: Your Systems Architecture Map, {{contact.first_name}}

Preview: Your architecture is fragmented. Here is what that costs and where to start.

From: Matt | Founder, Paradigm Consulting

{{contact.first_name}},

You just completed the System Architecture Audit.

Your architecture score is {{contact.saa_overall_score}} out of 100 — Fragmented tier. Your business is running on founder presence rather than infrastructure. Systems exist in isolation if they exist at all, and the founder is the connective tissue holding everything together.

Your estimated annual architecture drag is \$ {{contact.saa_estimated_cost_low}} to \$ {{contact.saa_estimated_cost_high}}. That is not revenue lost to a competitor. It is capacity your business structurally cannot access because the infrastructure that would unlock it is not in place.

You have {{contact.saa_gap_count}} full system gaps and {{contact.saa_fragile_count}} fragile categories on your map. Each one is a ceiling — on revenue, on clients served, on decision speed, and on what the business is worth if you ever choose to transact.

Over the next two weeks I want to walk you through what a functioning systems architecture looks like and why the installation sequence matters as much as the installation itself.

Reply if anything on your map landed as especially urgent. I read every response.

Matt

Founder, Paradigm Consulting

[Review My Systems Map](#)

← link to results page

BRANCH B — SAA_TIER_PRIORITY = 2 (DEVELOPING)

Subject: Your Systems Architecture Map, {{contact.first_name}}

Preview: Some systems are working. The gaps that remain are specific and costly.

From: Matt | Founder, Paradigm Consulting

{{contact.first_name}},

You just completed the System Architecture Audit.

Your architecture score is {{contact.saa_overall_score}} out of 100 — Developing tier. Some of your systems are working and producing real leverage. The gaps that remain are concentrated in specific categories rather than spread across everything.

Your estimated annual architecture drag is \$ {{contact.saa_estimated_cost_low}} to \$ {{contact.saa_estimated_cost_high}}. That number reflects only your gap and fragile categories — not an average across the whole map. Every dollar of that estimate comes from the {{contact.saa_gap_count}} gaps and {{contact.saa_fragile_count}} fragile categories on your map. The systems that are working are not contributing to that cost.

Over the next two weeks I want to walk you through what closing those specific gaps looks like — and why the work at your score level is different from building from scratch.

Reply if anything on your map felt immediately relevant.

Matt

Founder, Paradigm Consulting

[Review My Systems Map](#)

← link to results page

BRANCH C — SAA_TIER_PRIORITY = 3 (STRUCTURED)

Subject: Your Systems Architecture Map, `{{contact.first_name}}`

Preview: Most of your systems are working. The remaining gaps are creating specific drag.

From: Matt | Founder, Paradigm Consulting

`{{contact.first_name}}` ,

You just completed the System Architecture Audit.

Your architecture score is `{{contact.saa_overall_score}}` out of 100 — Structured tier. Most of your systems are in place and working. The gaps that remain are specific rather than widespread and they are creating drag on what an otherwise strong architecture can produce.

Your estimated annual drag from the remaining gaps is \$ `{{contact.saa_estimated_cost_low}}` to \$ `{{contact.saa_estimated_cost_high}}` . At your score level that is an optimization number — the distance between a structured architecture and a fully integrated one. You have `{{contact.saa_gap_count}}` full gaps and `{{contact.saa_fragile_count}}` fragile categories. Those are the specific areas still routing work to the founder that the system should be handling.

Over the next two weeks I want to walk you through what closing those gaps looks like at your stage and why the remaining work is faster than building from scratch.

Reply if anything on your map felt immediately relevant.

Matt

Founder, Paradigm Consulting

[Review My Systems Map](#)

← link to results page

BRANCH D — SAA_TIER_PRIORITY = 4 (INTEGRATED)

Subject: Your Systems Architecture Map, {{contact.first_name}}

Preview: Your architecture is strong. Here is what the remaining gaps are costing you.

From: Matt | Founder, Paradigm Consulting

{{contact.first_name}},

You just completed the System Architecture Audit.

Your architecture score is {{contact.saa_overall_score}} out of 100 — Integrated tier. Your systems work together, your infrastructure is producing real leverage, and the remaining gaps are precision optimization opportunities rather than structural risks.

Your estimated drag from the remaining gaps is \$ {{contact.saa_estimated_cost_low}} to \$ {{contact.saa_estimated_cost_high}}. At your score level that is the gap between a strong architecture and an investment-grade one. You have {{contact.saa_gap_count}} full gaps and {{contact.saa_fragile_count}} fragile categories — the specific areas where the architecture has not yet been pushed to the level the next stage of growth requires.

Over the next two weeks I want to walk you through what advancing a strong architecture looks like and how the 3×3OS engagement is scoped differently at your score level than it is for businesses building from scratch.

After all four branches: All contacts converge on the shared sequence below.

Email 2 — Wait 2 days after Email 1

Subject: Where the \$ {{contact.saa_estimated_cost_low}} to \$ {{contact.saa_estimated_cost_high}} actually comes from

Preview: These are not general estimates. Here is the specific source of each number.

From: Matt | Founder, Paradigm Consulting

{{contact.first_name}},

Two days ago you completed the System Architecture Audit.

I want to break down your estimated annual drag of \$ {{contact.saa_estimated_cost_low}} to \$ {{contact.saa_estimated_cost_high}} because it comes from specific, measurable sources — not a generic estimate applied to your score.

CRM gaps produce lead leakage and pipeline blindness. Businesses without functioning CRM infrastructure lose an average of 20 to 35% of leads to follow-up gaps that manual effort cannot consistently close.

Marketing gaps produce inconsistent lead flow tied to founder availability. When marketing requires the founder to initiate or approve, lead volume correlates with founder capacity rather than system capacity.

Delivery gaps produce churn from inconsistent client experience. Inconsistent onboarding produces first-90-day churn rates 2 to 3x higher than systematized delivery. The cost of replacement exceeds the cost of prevention by a significant margin.

Finance gaps produce slow decisions from delayed visibility. Founders without automated financial reporting make pricing and capacity decisions on data that is weeks old.

Team gaps produce output loss from founder-dependent rhythm and informal authority. Teams without documented operating structure perform at 50 to 65% of their actual output capacity.

Technology gaps produce manual labor costs that automation should be eliminating. Siloed tools and manual workflows consume team capacity that compounds across every transaction.

Your {{contact.saa_gap_count}} gaps and {{contact.saa_fragile_count}} fragile categories are where these costs are sitting in your specific business.

Email 3 — Wait 2 more days

Subject: Why the order of installation matters as much as the installation

Preview: Most founders who try to build systems independently install them in the wrong sequence.

From: Matt | Founder, Paradigm Consulting

{{contact.first_name}},

Your systems map identified {{contact.saa_gap_count}} full gaps and {{contact.saa_fragile_count}} fragile categories. I want to be specific about why the sequence matters — because most founders who attempt to close architecture gaps independently do them in the wrong order and get results that do not hold.

The sequence is the same regardless of which specific categories need work.

Operational governance first. Decision authority, SOPs, and process documentation have to exist before any other system can be delegated. You cannot automate a process that is not documented. You cannot delegate a function that has no defined authority structure. Every other installation depends on this layer being in place.

Delegation and team infrastructure second. Once the process and authority documentation exists, the team can take over functions that were previously routing to the founder. This layer creates the operational independence that makes technology investment worthwhile.

Technology and automation third. Automation installed on top of documented processes and a team with clear authority compounds the leverage the first two layers created. Automation installed before the first two layers just automates the chaos faster.

The 3×3OS engagement installs the layers your map revealed are missing in the right sequence so each one compounds on the previous one rather than creating more complexity to manage.

Email 4 — Wait 3 more days

Important: This email uses the pre-calculated quarterly fields: `saa_estimated_cost_low_quarterly` and `saa_estimated_cost_high_quarterly`. These are already included in the webhook payload.

Subject: What staying at your current architecture score costs per quarter

Preview: The drag is not a one-time number. It compounds every quarter it stays open.

From: Matt | Founder, Paradigm Consulting

`{{contact.first_name}}`,

One week ago you completed the System Architecture Audit.

Your estimated annual architecture drag is \$ `{{contact.saa_estimated_cost_low}}` to \$ `{{contact.saa_estimated_cost_high}}`. I want to frame that number differently.

Divided by four, that is \$ `{{contact.saa_estimated_cost_low_quarterly}}` to \$ `{{contact.saa_estimated_cost_high_quarterly}}` per quarter. That is the cost of each quarter the architecture stays in its current state. Not as a penalty — as a structural capacity limitation that prevents the business from producing what it is already capable of producing if the infrastructure were in place.

The 3×3OS engagement addresses your specific gap categories in 90 days. The cost of the engagement is fixed. The cost of the architecture drag is recurring and compounding.

Founders who address architecture gaps proactively pay a known, finite cost and get a functioning infrastructure that compounds over time. Founders who address them reactively — when something breaks, when a transaction reveals the gaps, when a key team member leaves and the tribal knowledge leaves with them — pay more, at the worst possible time, in the worst possible conditions.

The application is open.

Matt

Founder, Paradigm Consulting

[Apply for 3×3OS](#)

← application page (tracked link)

Email 5 — Wait 7 more days

Subject: One last thing, `{{contact.first_name}}`

Preview: The architecture does not fix itself. The application is five minutes.

From: Matt | Founder, Paradigm Consulting

`{{contact.first_name}}` ,

Two weeks ago you completed the System Architecture Audit.

Your architecture score was `{{contact.saa_overall_score}}` out of 100. Your estimated annual drag is \$ `{{contact.saa_estimated_cost_low}}` to \$ `{{contact.saa_estimated_cost_high}}` . Your map showed `{{contact.saa_gap_count}}` full gaps and `{{contact.saa_fragile_count}}` fragile categories.

I am not going to repeat everything I have shared over the past two weeks.

What I want to say is simpler.

Architecture gaps do not self-correct. The cost compounds every quarter the systems stay in their current state. The founders who address this proactively build businesses that scale, transact well, and operate without them at the center. The founders who address it reactively deal with it at the worst possible time and in the worst possible conditions.

The 3×3OS engagement installs the architecture your map revealed is missing or fragile. Sequenced. Documented. Built to hold under growth pressure without requiring the founder to maintain it personally.

Application-only. Reviewed personally. Five minutes.

Matt

Founder, Paradigm Consulting

P.S. Your lowest scoring system category is where the engagement starts. That is the gap creating the most drag on everything connected to it.

[Apply for 3×3OS](#) ← application page (tracked link)

After Email 5 — Sequence Cleanup

1. Wait 1 day
2. Remove tag: `email-sequence-active`
3. Add tag: `sequence-completed`
4. Condition: If pipeline stage still equals "Email Sequence Active" → move to **Nurture - Long Term**

WORKFLOW 2: SAA — RE-ENGAGEMENT 30 DAY

Workflow Setup

1. Create workflow: **SAA — Re-Engagement 30 Day**
2. Trigger conditions (ALL must be true):
 - Tag = `system-architecture-lead`
 - Pipeline stage = Assessment Submitted OR Email Sequence Active
 - Last activity more than 30 days ago
 - Tag `applied-3x3os` does NOT exist
3. Publish when complete

Steps

Step 1 — Multi-Assessment Check:

- If `multi_assessment_routing_active` = YES → **Stop workflow immediately**
- Otherwise continue

Step 2 — Send Re-Engagement Email:

Subject: Still thinking about it, `{{contact.first_name}}` ?

Preview: Your systems map is ready. The gaps have not closed themselves.

From: Matt | Founder, Paradigm Consulting

`{{contact.first_name}}` ,

A few weeks ago you completed the System Architecture Audit.

Your architecture score was `{{contact.saa_overall_score}}` out of 100 with an estimated \$ `{{contact.saa_estimated_cost_low}}` to \$ `{{contact.saa_estimated_cost_high}}` in annual architecture drag across your `{{contact.saa_gap_count}}` gap categories.

Architecture gaps do not self-correct. The cost compounds every quarter the systems stay in their current state.

If the timing was not right when we first reached out, it may be different now. The 3×3OS engagement is still accepting applications. Five minutes. Reviewed personally. No obligation.

Matt

Founder, Paradigm Consulting

[Apply for 3×3OS](#)

← application page (tracked link)

Step 3: Wait 7 days

Step 4 — If no apply click:

1. Remove tag: `email-sequence-active`
2. Add tag: `sequence-completed`

3. Move pipeline to: **Nurture - Long Term**

UPDATE: MULTI-ASSESSMENT PRIORITY ROUTER

- 1. Open existing **Multi-Assessment Priority Router** workflow
 - 2. Add `saa_tier_priority` to the worst-score comparison logic alongside all existing tier priority fields (fei_tier_priority, cma_tier_priority, fbe_tier_priority, etc.)
 - 3. Add routing branch: when `worst_assessment_tool` = SAA → enroll in **SAA — Email Sequence**
 - 4. Republish workflow
-

SMART LISTS

LIST NAME	FILTER
SAA — All Leads	Tag = <code>system-architecture-lead</code>
SAA — Fragmented Priority	Tag = <code>saa-fragmented</code>
SAA — Active Sequences	Tag = <code>email-sequence-active</code> AND Tag = <code>system-architecture-lead</code>
SAA — Completed Not Applied	Tag = <code>sequence-completed</code> AND Tag = <code>system-architecture-lead</code> AND Tag <code>applied-3x3os</code> does NOT exist

FINAL TESTING CHECKLIST

#	TEST	PASS
1	Confirm SAA intake webhook URL matches <code>WEBHOOK_SYSTEM_ARCHITECTURE_AUDIT</code> in Netlify env vars	☐
2	Submit test lead — Fragmented tier: all fields map correctly, tag <code>saa-fragmented</code> applied, <code>saa_tier_priority</code> = 1	☐
3	Submit test lead — Developing tier: tag <code>saa-developing</code> applied, <code>saa_tier_priority</code> = 2	☐
4	Submit test lead — Structured tier: tag <code>saa-structured</code> applied, <code>saa_tier_priority</code> = 3	☐
5	Submit test lead — Integrated tier: tag <code>saa-integrated</code> applied, <code>saa_tier_priority</code> = 4	☐
6	Confirm <code>assessments_completed_count</code> increments on each submission	☐
7	Confirm correct Day 0 email branch fires for each tier	☐
8	Confirm Email 4 correctly uses quarterly cost merge fields	☐
9	Submit same email through a second assessment → Multi-Assessment Priority Router fires instead of individual enrollment	☐
10	Confirm re-engagement workflow stops when <code>multi_assessment_routing_active</code> = YES	☐
11	All emails send from “Matt Founder, Paradigm Consulting”	☐
12	All CTA buttons use tracked links tagged <code>Apply-3x30S-Link</code>	☐
13	Application page URL correct in Email 2–5 and re-engagement	☐
14	Results page URL correct in Day 0 CTA buttons	☐
15	Goal step fires correctly when tracked link is clicked — tags update, pipeline moves, sequence stops	☐
16	Sequence cleanup fires after Email 5: <code>email-sequence-active</code> removed, <code>sequence-completed</code> added, pipeline moved to Nurture	☐
17	Internal notification email arrives at jay@paradigmconsulting.co with correct merge fields	☐
